

Static Dissipative Swabs

Product Description

Coventry™ Static Dissipative Technology Swabs have been engineered to eliminate static electricity concerns. The handle of these Coventry swabs are static dissipative. They are non-contaminating and have excellent solvent compatibility, even in acetone. These swabs are a perfect choice for cleaning static sensitive components and working around static sensitive parts. Blue handle material is more solvent resistant, while clear handles are stronger and more rigid.

- Surface resistivity of 1.0×10^{10} ohms/sq.
- Low ionic, nonvolatile residue, and particulate contamination
- No humidity dependency
- No amines or amides
- No silicones
- No static dissipative coatings
- No tribo-charge generated
- Handles will dissipate 99% of (5 kV) charge in 0.5 seconds
- Blue handles have excellent solvent resistance due to durable alloy

Compatibility

Fabric Swab Heads are generally compatible with all common solvents including ketones, toluene, dilute or weak acids.

Foam Swab Heads are compatible with most common solvents such as isopropyl alcohol and methanol. Foam swabs are typically not recommended for use with acetone or MEK.

Blue handle material is very resistant to all commonly used solvents.

Sealed Fabric ESD Swabs

- Proprietary single step sealing process
- Excellent strength and solvent compatibility
- Does not generate loose fibers or particles
- Head is thermoformed and welded to the handle; no adhesives or binders used
- Ultra-low ionic, nonvolatile residue, and particle contamination
